FACES Platform Release Agreement

The FACES database was developed at the Max Planck Institute for Human Development (MPIB), Berlin, Germany between 2005 and 2007. Meanwhile, derivatives of the original FACES datasets were created by members of the FACES team, i.e. Dynamic FACES (a collection of morphed videos based on the original FACES images) and Scrambled FACES (a collection with randomly scrambled versions of the original FACES images).

The FACES Technical Agent of the Max Planck Society is responsible for the distribution of all objects available via the FACES platform. These objects will be made available to researchers on a case-by-case (i.e., person-by-person and study-by-study) basis. All requests for the FACES objects must be submitted in writing to the FACES Technical Agent. To obtain access to the objects, the researcher must sign this document and thereby agree to observe the restrictions listed in this document, and to inform all other persons/researchers involved in the specific study about the restrictions. After approval of their request, researchers can access the FACES objects via an online service provided by the Max Planck Digital Library. Images are available in jpg format; videos are available in mp4 and mov format. No other formats or methods of distribution will be permitted. There will be no charge for the objects available via the FACES platform.

The undersigning researcher agrees to the following restrictions on the FACES platform:

1. The FACES platform must only be used for research purposes.
2. The FACES platform must only be used for the specific study outlined in this release form and only by the researcher signing this release form. If the study is a collaborative project, all researchers involved need to submit a Release Agreement. Conducting multiple studies using the FACES platform requires the submission of multiple release forms, one for each study.

3. All requests for access to the FACES platform must be forwarded to the FACES Technical Agent.
4. The objects available via the FACES platform must not be distributed, published, copied, or further disseminated in any way or form whatsoever, whether for profit or not. This also includes further distributing, copying or disseminating to a facility or organization unit within the requesting university, organization, or company. In the event that access to FACES objects cannot be controlled by the researchers directly (e.g. in the case of a decentralized presentation of stimuli via platforms for the online execution of studies), the study participants who are granted access to the FACES objects in this way are to be committed in an appropriate way (e.g. by showing the provided disclaimer before the presentation of the FACES stimuli and by making consent to the disclaimer obligatory) that the stimuli shown must not be distributed, published, copied, or further disseminated.
5. Objects available via the FACES platform must only be used in the form they are delivered. As a rule, they must not be modified or processed in any way. Exceptions may be possible in certain cases, but require prior agreement by the FACES Technical Agent and adherence to additional conditions. Please contact the FACES Technical Agent if you wish to modify the FACES objects for your study.
6. Objects available via the FACES platform are neither permitted for publication in any type of report, paper, and other document nor permitted for display in any type of presentation or exhibition.
7. Exempt from rule 6 are objects (photographs and videos) based on pictures of the following persons: 004, 066, 079, 116, 140, and 168. Research-related publication and display of the corresponding photographs/videos are permitted for the purpose of illustrating research methodology. These photographs/videos must not be published or displayed for any other purpose. All other rules fully apply to this subset of objects as well.
8. All documents and papers that report on research that uses the FACES platform are requested to acknowledge the use of the FACES database by citing the reference below or by citing collection-specific references indicated on the FACES platform.
 - Ebner, N. C., Riediger, M., & Lindenberger, U. (2010). FACES—A database of facial expressions in young, middle-aged, and older women and men: Development and validation. *Behavior Research Methods*, 42, 351-362. doi:10.3758/BRM.42.1.351

9. FACES objects and any work results generated under this Agreement must not be used, be it directly or indirectly, for human rights violations, and must not be supplied to military or for military purposes.

I confirm that I have read and will conform to the **FACES Platform Release Agreement**.

Description of the study the FACES platform will be used for (continue on next page if necessary):

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.
